EDUCATION

University of Pennsylvania, School of Engineering & Applied Science | Philadelphia, PA, United States *May 2026*
Candidate for Master of Science in Engineering, *Major: Robotics | Concentrations: Computer Vision, Autonomous Driving* GPA: 3.78/4.0
University of Tokyo, Faculty of Engineering | Bunkyo, Tokyo, Japan *March 2022*
Bachelor of Engineering, *Major: Mechanical Engineering* GPA: 3.64/4.0

SKILLS & RELEVANT COURSEWORK

Software Skills: Python, Pytorch, C++, ROS1, ROS2, Software development, Embedded software, Vehicle software, Matlab, Arduino IDE, Simulator, OpenCV, CAD (Autoware, SolidWorks), Autonomous driving algorithms, ADAS, Git
Hardware Skills: Additive manufacturing, CAD, Statistics, 3D Printing, Fabrication, LiDAR, RGB camera, GPS
Other Skills: Leadership, Research, Design and development, Report writing, Teamwork, Troubleshooting
Relevant Coursework: F1tenth Autonomous Racing Cars; Machine Learning; Mechatronics; Automotive Engineering; Learning in Robotics; Advanced Robotics; Computer Vision; Machine Perception; Dynamics and Control; Manufacturing

EMPLOYMENT EXPERIENCE

Vijay Kumar Lab | *Summer Research Intern*, Philadelphia, PA, United States *May 2025 – Current*

- Implemented driving simulators that visualized data of event camera on F1tenth car using Gazebo, CARLA, and ROS
- Collecting datasets on driving simulators for lane following motion control to train event-based policy model

ModLab | *Summer Research Intern*, Philadelphia, PA, United States *May 2025 – Current*

- Migrated ROS1 codes to ROS2
- Building computer vision system that detected surgical needle posture using color identification and April Tag

BOSCH | *Software Intern*, Tsuzuki, Kanagawa, Japan *August 2023 – September 2023*

- Designed and built map to enhance autonomous driving by visualizing key information, such as routes and vehicle state using MATLAB; helped company's engineers understand signals sent from cars visually
- Improved BOSCH's software that processed location CAN signals from cars; refined accuracy of system outputs
- Presented to approx. 100 employees, including managers; showed the company what my group was developing
- Collaborated with colleagues from 10 countries and different majors; made outcomes reflecting diverse opinions

DMG MORI | *Industrial Practices Intern, Additive Manufacturing R & D*, Iga, Mie, Japan *August 2021 – September 2021*

- Monitored and analyzed performance tests of additive manufacturing machines
- Investigated additive manufacturing methods, e.g. 3D printing; proposed innovative solutions to technical challenges

PROJECTS

F1tenth Autonomous Racing Cars | *Autonomous Driving, Motion Planning, Control, Python, C++, ROS, LiDAR* *January 2025 – Present*

- Developed autonomous racing car that was 1/10 scale of F1 racing cars; designed and implemented motion planning and vehicle control systems using Python and C++ ROS; won second place for fastest lap in race

Research of Traffic Collision Prediction System | *Prototyping, Extended Kalman Filter, C++, ROS* *April 2022 – March 2023*

- Designed and built collision prediction system among pedestrian, cyclist, and intelligent wheelchair
- Wrote C++ ROS codes that detected pedestrians and cyclists based on LiDAR data
- Conducted sensor fusion using Extended Kalman Filter; estimated pedestrians and cyclists' positions
- Operated RTK-GPS, low-accuracy GPS, LiDAR, and IMU to collect and integrate data into system development
